## Video Streaming Concerts / Live Events

### Process:

Connect 1 or more cameras to the encoder.  
Optionally, a directors feed can be sent from the A/V console to the encoder.  
Content is encoded, including DRM, in the workstation.  
Content will then stream to internet, and the stream will be replicated by video streaming servers to the viewers.

### Viewer:

To watch live content, viewer clicks on a link on the clients website.  
They will pay for the single event, or season pass.  
They will then click a link that connects to the video stream.
